

JEFREY PERALTA

Forward Deployed / Applied AI Engineer

Production Software · AI Systems · Business Operations

New Jersey (Remote) · peraltajefrey@gmail.com · (908) 986-4555 · [linkedin.com/in/jefrey-peralta-203719139](https://www.linkedin.com/in/jefrey-peralta-203719139) · github.com/TheRealTradeX

SUMMARY

After founding and running a software company, I know what kind of engineer I want to be: the kind who works close to the business. As founder and sole engineer at Velocity Funds, I designed, shipped, and operated a production fintech platform end to end — payments, realtime market data, distributed backend services, AI features, and live production operations. At Advanced Recovery Group I did the collections work myself, then built ResolveOS, the internal workspace the job now runs on every working day. I'm looking for forward deployed and applied AI engineering roles, where translating a real operation into production software — and owning it after it ships — is the job.

SELECTED ENGINEERING HIGHLIGHTS

- Architected, built, and operated a production fintech platform as the sole software engineer, from first commit through live customers.
- Designed a production architecture spanning 237 API endpoints and 83 PostgreSQL tables.
- Built resilient subscription billing, payment, payout, webhook, entitlement, and reconciliation systems.
- Engineered distributed backend services on PostgreSQL, Redis, and BullMQ using asynchronous workers, idempotent processing, and optimistic concurrency.
- Shipped applied-AI product surfaces for trader coaching, behavioral analytics, and market intelligence, with versioned prompts, model routing, usage caps, and streaming on OpenAI.
- Built ResolveOS inside a live collections operation and deployed it into daily use, replacing the spreadsheets the workflow ran on.
- Owned architecture, implementation, deployment, production incident response, and long-term platform evolution.

EXPERIENCE

Velocity Funds / Velocity Co. · Founder, Founding Product Engineer (2025 – Present)

A production fintech platform taken from concept to launch and operated live — designed, built, deployed, and maintained solo.

- **Product.** Owned product direction, UX, and every technical decision. Built the customer-facing application — onboarding, dashboards, subscriptions, analytics — alongside the internal tooling that runs the business.
- **Architecture.** Implemented distributed services across 237 API endpoints and 83 PostgreSQL tables using TypeScript, React, Next.js, Supabase, Redis, and BullMQ.
- **Reliability.** Designed event-driven systems around observability, recoverability, and resilience: asynchronous workers, idempotent handlers, and optimistic concurrency control.
- **Payments.** Built subscription billing, recurring payments, payouts, webhook processing, entitlement gating, and financial reconciliation against live processors.
- **AI.** Built the Velocity Intelligence suite — trader coaching, behavioral analytics, and post-session review — on OpenAI, with versioned prompts, a model router, per-user usage caps, and streamed responses.
- **Operations.** Deployed and operated the platform on Vercel and Railway, handling production incident response, monitoring, and long-term platform evolution.

Advanced Recovery Group · Account Manager (2024 – Present)

- Manage commercial finance accounts, settlements, payment reconciliation, and legal coordination.
- Built and deployed ResolveOS, the internal workspace the collections job now runs on — prioritized follow-up queues, a settlement pipeline, payment schedules, and month-end reconciliation.
- Learned the workflow by doing it, then encoded its unwritten rules: follow-up cadence by account age, at-risk flagging, and imports that survive messy real-world spreadsheets.

Utopian Estate / Nova Resolutions Group · Founder & Managing Partner (2021 – 2024)

- Built CRM-driven business systems supporting acquisitions, reporting, finance, and operations.
- Designed scalable operational workflows and internal business tooling.

Leverage Companies (Private Equity) · Lead Acquisition Manager & CRM Systems Developer (2019 – 2021)

- Designed, developed, and administered the company's Salesforce CRM.
- Built workflow automations, dashboards, reporting systems, and lead management processes.
- Supported company growth from approximately \$50K to \$500K in monthly recurring revenue through scalable CRM and operational systems.
- Partnered directly with leadership to translate business requirements into software solutions.

TECHNICAL SKILLS

Languages TypeScript, JavaScript, Python, SQL, HTML, CSS

Application Engineering React, Next.js, Node.js, FastAPI, Tailwind CSS

Data & Distributed Systems PostgreSQL, Supabase, Redis, BullMQ, webhooks, realtime data pipelines

Applied AI OpenAI APIs, LLM product integration, versioned prompt management, model routing, streaming, usage controls, AI-assisted engineering (Claude Code)

Infrastructure Vercel, Railway, Docker, Cloudflare, Sentry, Git, GitHub

Business Systems Salesforce, CRM architecture, workflow automation, Authorize.Net payments, subscription billing, reconciliation

EDUCATION & CERTIFICATION

Education:

Western Governors University — B.S./M.S. Computer Science, accelerated pathway (January 2026 – Present)

Berkeley College — Bachelor of Business Administration

Certifications:

Salesforce Certified Administrator

The App Brewery — Complete Full-Stack Web Development Bootcamp
