

Jefrey Peralta

Forward Deployed / Applied AI Engineer

Production Software • AI Systems • Business Operations

New Jersey, USA peraltajefrey@gmail.com [GitHub](#) [LinkedIn](#)

PROFILE

Engineer who works where software meets business operations. As a founder and operator I discovered problems inside live workflows, translated them into requirements, architected the systems, built them full-stack, deployed them, and operated them in production: payments and reconciliation, realtime market data, background processing, applied AI features, and the internal tooling behind them. I practice disciplined AI-assisted development, pairing engineering ownership with context engineering, human-in-the-loop review, and verification. Targeting forward deployed, applied AI, solutions, and customer engineering roles, and product engineering roles with customer-facing technical ownership.

EXPERIENCE

Velocity Funds / Velocity Co.

2025 – Present

Founding Product Engineer

- Translated the business model itself into software requirements: evaluation rules, payout eligibility, risk enforcement, and the operational workflows behind them.
- Designed and shipped the trader platform: onboarding, evaluation dashboards, real-time account tracking, analytics, and AI-assisted performance features (OpenAI, versioned prompts, model routing, streaming).
- Built the financial infrastructure: checkout and payment webhooks with idempotency handling, entitlements, payout eligibility, and reconciliation against provider records.
- Owned the production database, PostgreSQL on Supabase with row-level security, timestamped migrations, and realtime publications, through a real launch and its post-launch incidents.

- Ran the supporting systems: transactional and campaign email, an internal CRM view over platform data, a Discord operations bot, and the public marketing site.

Advanced Recovery Group

2024 - Present

Account Manager

- Translated a live collections workflow's unwritten rules (account cadence, settlement stages, payment plans) into working software while performing the work it supports.
- Built CSV-first onboarding tolerant of messy real spreadsheets: fuzzy header mapping, deduplication keys, and multi-format date normalization.
- Encoded the operational rules directly: age-based follow-up prioritization, at-risk flagging, and month-end payment archival.
- Iterated terminology and behavior from daily use inside the operation, not from a spec.

Utopian Estate / Nova Resolutions Group

2021 - 2024

Founder & Managing Partner

- Built CRM-driven business systems supporting acquisitions, reporting, finance, and operations.
- Designed scalable operational workflows and internal business tooling.

Leverage Companies (Private Equity)

2019 - 2021

Lead Acquisition Manager & CRM Systems Developer

- Partnered directly with leadership to translate business requirements into software solutions.
- Built workflow automations, dashboards, reporting systems, and lead management processes.
- Supported company growth from approximately \$50K to \$500K in monthly recurring revenue through scalable CRM and operational systems.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, HTML, CSS

Application engineering: React, Next.js, Node.js, FastAPI, Tailwind CSS

Data & distributed systems: PostgreSQL, Supabase, Redis, BullMQ queues, webhooks, realtime data pipelines

Applied AI: OpenAI APIs, LLM product integration, versioned prompt management, model routing, SSE streaming, usage controls, AI-assisted engineering (Claude Code, context engineering, human-in-the-loop review)

Infrastructure: Vercel, Railway, Docker, Cloudflare, Sentry, Git & GitHub

Business systems & integrations: Salesforce, CRM architecture, workflow automation, Authorize.Net payments, subscription billing, reconciliation, transactional email, market data feeds

EDUCATION & CERTIFICATION

Western Governors University: B.S. and M.S. Computer Science pathway, enrolled, beginning September 2026.

Berkeley College: Bachelor of Business Administration.

Salesforce Certified Administrator

The App Brewery: Complete Full-Stack Web Development Bootcamp
