

JEFFREY PERALTA

Founding Product Engineer

Full Stack Software Engineer · AI Product Engineering · FinTech

New Jersey (Remote) · peraltajefrey@gmail.com · (908) 986-4555 · linkedin.com/in/jefrey-peralta-203719139 · github.com/TheRealTradeX

SUMMARY

After founding and building a software company, I'm looking to focus my career on software engineering. As founder and sole engineer at Velocity Funds, I designed, shipped, and operated a production fintech platform end to end — frontend, distributed backend services, payments, AI features, infrastructure, and live production operations. Running that company taught me a lot about business; building it taught me that the work I actually want to do is engineering. I am looking for a product engineering role where owning a surface from architecture through deployment is the job.

SELECTED ENGINEERING HIGHLIGHTS

- Architected, built, and operated a production fintech platform as the sole software engineer, from first commit through live customers.
- Designed a production architecture spanning 237 API endpoints and 83 PostgreSQL tables.
- Built resilient subscription billing, payment, payout, webhook, entitlement, and reconciliation systems.
- Engineered distributed backend services on PostgreSQL, Redis, and BullMQ using asynchronous workers, idempotent processing, and optimistic concurrency.
- Shipped AI-native product surfaces for trader coaching, journaling, behavioral analytics, and market intelligence.
- Built internal CRM, affiliate management, analytics, administrative dashboards, and customer support tooling.
- Owned architecture, implementation, deployment, production incident response, and long-term platform evolution.

EXPERIENCE

Velocity Funds / Velocity Co. · Founder, Founding Product Engineer (2025 – Present)

A production fintech platform taken from concept to launch and operated live — designed, built, deployed, and maintained solo.

- **Product.** Owned product direction, UX, and every technical decision. Built the customer-facing application — onboarding, dashboards, subscriptions, analytics — alongside the internal tooling that runs the business.
- **Architecture.** Implemented distributed services across 237 API endpoints and 83 PostgreSQL tables using TypeScript, React, Next.js, Supabase, Redis, and BullMQ.
- **Reliability.** Designed event-driven systems around observability, recoverability, and resilience: asynchronous workers, idempotent handlers, and optimistic concurrency control.
- **Payments.** Built subscription billing, recurring payments, payouts, webhook processing, entitlement gating, and financial reconciliation against live processors.
- **AI.** Developed AI-native features for trader coaching, behavioral analytics, journaling, and performance insight, integrated directly into the trader dashboard.
- **Operations.** Deployed and operated the platform on Vercel and Railway, handling production incident response, monitoring, and long-term platform evolution.

Advanced Recovery Group · Account Manager (2024 – Present)

- Manage commercial finance accounts, settlements, payment reconciliation, and legal coordination.
- Identify and specify automation opportunities across financial workflows and CRM systems, translating day-to-day operational friction into concrete tooling requirements.

Utopian Estate / Nova Resolutions Group · Founder & Managing Partner (2021 – 2024)

- Built CRM-driven business systems supporting acquisitions, reporting, finance, and operations.
- Designed scalable operational workflows and internal business tooling.

Leverage Companies (Private Equity) · Lead Acquisition Manager & CRM Systems Developer (2019 – 2021)

- Designed, developed, and administered the company’s Salesforce CRM.
- Built workflow automations, dashboards, reporting systems, and lead management processes.
- Supported company growth from approximately \$50K to \$500K in monthly recurring revenue through scalable CRM and operational systems.
- Partnered directly with leadership to translate business requirements into software solutions.

TECHNICAL SKILLS

LanguagesTypeScript, JavaScript, SQL, HTML, CSS

FrontendReact, Next.js, Tailwind CSS

BackendNode.js, Express, PostgreSQL, Supabase, Redis, BullMQ, REST APIs

InfrastructureVercel, Railway, Docker, Git, GitHub

FinTechAuthorize.Net, payment processing, subscription billing, webhooks, reconciliation

AIOpenAI APIs, LLM product development, prompt engineering

Business SystemsSalesforce, CRM architecture, workflow automation

EDUCATION & CERTIFICATION

Education:

Western Governors University — B.S. Computer Science, (in progress - accelerated B.S./M.S. pathway)

Berkeley College — Bachelor of Business Administration

Certifications:

Salesforce Certified Administrator

The App Brewery — Complete Full-Stack Web Development Bootcamp
